INSULATION DISPLACEMENT ULTRA ATA/UDMA CABLE ASSEMBLIES

CA's patented ATAS® Ultra ATA 80-conductor cable assemblies meet the requirements of the SFF-8049 specification. The connectors have the same 40-pin form factor as IDE cables, however, there are 40 signal wires and 40 ground wires. The patented ground bus in each connector reduces cross talk and eliminates system errors. ATAS® cables are REQUIRED on Ultra ATA/66 & 100MB/s devices and improve the performance of 33MB/s devices. These cables support EIDE, Ultra DMA, ATA-3, ATA-4, and Ultra ATA drives.

CA-905131-02
Cable length, 18" maximum according to the SFF-8049 specification.
(12" from host to secondary drive, then 6" to primary drive)

CA-905136-02
Cable length, 24" for custom applications.
(18" from host to secondary drive, then 6" to primary drive)

Other lengths and configurations available for custom applications.

PATENTED DESIGN

Custom configurations for custom applications available on all cable assemblies.
